

SENIOR AIX ADMINISTRATOR:

The responsibilities of the SENIOR AIX ADMINISTRATOR will primarily include, but will not be limited to:

1. Administering AIX/Unix server platforms
2. Installing/updating/troubleshooting AIX/Unix server software
3. Monitoring server performance and storage utilization.

The SENIOR AIX ADMINISTRATOR shall possess a minimum of:

1. Skilled at installing, administering, and troubleshooting server operating systems (e.g. AIX/Unix Server), and be knowledgeable in systems management software (such as IBM Tivoli, etc.).
2. Four (4) years experience in installing, managing, tuning and recovering AIX 5L for IBM clustered P-Series (670 & 650) and SAN Storage (ESS88).
3. Proficient in developing system configuration diagrams and systems management presentation graphics for tracking or planning of the distribution of the operating system, cache, applications, or user data files.
4. Able to use CAD or comparable software as well as presentation software in the preparation of pie charts, bar charts, and histograms for reports of systems performance and utilization.
5. The AIX Administrator shall possess a minimum of a Bachelor degree from an accredited institution, and have at least six (6) years of applicable work experience.
6. All needed IBM AIX certifications to run the related application and hardware covered within the scope of this Contract.
7. Preferred bilingual with English and Arabic speaking, reading and writing skills
